SUMMARY

Third-year **AI/ML undergraduate** with strong foundations in **Python, data structures, machine learning, and databases**, and hands-on experience building real-world AI systems using **LLMs, NLP, RAG architectures, and multimodal pipelines**. Proven ability to design, implement, and integrate end-to-end solutions with a focus on scalability, clarity, and real-world impact. Highly motivated, execution-driven, and capable of translating complex problems into practical AI solutions.

EXPERIENCE

AI Intern

Infosys Springboard

September 2025 - November 2025, Virtual Internship

- **Architected a high fidelity RAG (Retrieval Augmented Generation) engine** that processes complex legal statutes to deliver **hallucination free, citation backed** legal analysis using vector embeddings and GPT-4.
- **Engineered specialized AI agents** for autonomous **Legal Drafting, Case Summarization, and Adaptive Quizzing**, transforming unstructured legal texts into actionable, professional-grade documents.
- **Delivered a production ready Full-Stack application** featuring hybrid search logic (Vector + Keyword), robust cryptographic authentication, and a latency optimized pipeline for real-time inference.

PROJECT

NEXUS: Assistive AI for Blind Navigation

Vasireddy Venkatadri Institute of Technology • github.com/keerthi2436/NEXUS-Real-Time-Multimodal-Spatial-Assistant-

- Built an offline AI system that "sees" and "speaks" for visually impaired users.
- Used **YOLOv3** for object detection and **Geometric Math** to estimate distance without LIDAR sensors.
- Achieved real-time performance on CPU by optimizing threading and model quantization.

Intelligent Green Corridor System

Vasireddy Venkatadri Institute of Technology • github.com/keerthi2436/green-corridor-system

- **Engineered an autonomous "Green Wave" system** that utilizes real-time GPS telemetry to preemptively clear traffic signals for emergency vehicles.
- **Implemented dynamic geospatial algorithms** to calculate optimal routes and instantly trigger signal changes based on vehicle proximity.
- **Built a scalable command interface** using Python to visualize live fleet tracking and centrally control city-wide traffic infrastructure.

EDUCATION

Bachelor of Technology (B.Tech.) – Artificial Intelligence & Machine Learning

Vasireddy Venkatadri Institute of Technology • Namburu, Guntur District, Andhra Pradesh, India • Expected Graduation: 2027 • 8.23/10

CERTIFICATIONS

AWS APAC – Solutions Architecture Job Simulation

Forage • 2025

- Designed scalable and cost-efficient AWS-based cloud solutions.

Generative AI Professional

Oracle • 2025

- Gained hands-on skills in building and deploying generative AI solutions.

LLM

NPTEL • 2025

- Completed coursework covering transformers, attention mechanisms, pretraining, fine-tuning, and LLM applications.

SKILLS

Programming: Python, C, Java, HTML, CSS, JavaScript (basic), Data Structures

AI/ML: Machine Learning, NLP, Speech Recognition, Data Analysis, TensorFlow, scikit-learn

Cloud & Tools: AWS, SQL, Flask, React.js, GitHub, SpeechRecognition, gTTS, Google Translate API
